Sub: Specifications of Tubular Poles to be used for ADSS Optical Fibre Cable

Enclosed please find herewith a copy of report of the Committee (**Annexure-‘A’**) constituted for finalisation of specification of poles (posts) to be used for ADSS Cable alignment. There are two types of poles – 7 M and 8 M long, to be used for ADSS alignment. These poles are to be used in place of telephone posts being used hitherto. However, in case telephone posts are available, same may also be used.

The Engineering Instructions (EI) on installation practice of Self Supporting Aerial OF Cable has also been issued by Inspection and QA Circle (**Annexure-‘B’**). The EI may also be used for installation of ADSS Cable. Field units are also requested to offer their comments on the report of the Committee, if any, within 15 days from date of issue of this letter.

The tender for procurement of ADSS Cable and accessories is under finalization in Corporate Office. A separate tender is to be floated for procurement of tubular poles on the basis of requirement to be projected by field units. **The field units are, therefore, to submit the requirement of poles (7 M & 8 M) for installation of ADSS Cable with a fortnight positively.**

The revised allocation of ADSS Cable is enclosed at **Annexure-‘C’**.
